Scott raced quickly through the political history of Europe in the High Middle Ages, and I think the book would have been more balanced and on firmer ground had he spent more attention there and less on highly-speculative and not-terribly-illuminating questions, such as whether or not mnemonic exercises had some affect on cathedral building. The buildings are also viewed as examples reflecting the ambition and productivity of a medieval feudal society whose cultural habitus was significantly stamped by a belief in the world beyond, cultic practices, magical thought, thinking in symbols and images, and the multiple constraints of a way of life constantly at existential risk. Scott explores why medieval people built Gothic cathedrals, how they built them, what conception of the divine lay behind their creation, and how religious and secular leaders used cathedrals for social and political purposes. *The Making of the Middle Ages*. This work is largely successful at describing and explaining the historical and sociological context pertaining to the construction of gothic cathedrals.
