Most earthquakes in North America east of the Rockies occur as faulting within bedrock, usually miles deep. Alberta's Earthquakes For an earthquake to occur we require two ingredients:

Californiawildfirecleanupworkersfiredforpostinginsensitivephotos.

Updated 9 min ago. Few earthquakes east of the Rockies, however, have been definitely linked to mapped geologic faults, in contrast to the situation at plate boundaries such as California's San Andreas fault system, where scientists can commonly use geologic evidence to identify a fault that has produced Quake in the Rockies large earthquake and that is likely to produce large future earthquakes. The other earthquakes after that were smaller.
